## 1. Excellent small signal measurement capability

-160 dBm DANL (Displayed Average Noise Level), can observe weaker small signals.

## 2. More accurate low-noise measurements

Phase Noise <math>< -80\text{ dBc/Hz}</math> @1GHz at 10 kHz offset

## 3. Pass/Fail function

Quickly determine if the test results pass

## 4. Provides EMI pre-compliance test function

Equipped with EMI filter (6dB) and quasi-peak detector as standard, it is more accurate for EMI pre-test and diagnosis, and complete testing and production report can be completed by using supporting software.

## 5. Provide EMC test function (requires optional software)

Built-in more than 200 mainstream EMC test standards and regulations templates. The user selects the corresponding template, and the software automatically sets the spectrum analyzer and records the test data. The data and regulations can be compared on the same screen. Users can also customize regulations for comparative analysis.
